

Notice to the trade – Medcar Service EU ETS surcharge as from January 1st 2024

December 15th 2023

Dear Customers,

In our communication of 15th November 2023, we informed you about the implementation of the European Emissions Trading System (EU ETS) for maritime transport activities, effective from 1st January 2024.

All maritime companies, for services calling at least one European port, will be required to declare their CO2 emissions and convert them into emission allowances purchased on the EU carbon market.

The additional costs associated with the purchase of these allowances and investments made to reduce our emissions will result in the application of an EU ETS surcharge on all containers loaded on Marfret services affected by this new regulation.

Starting from January 1, 2024 (loading date), the new EU ETS surcharge rates applicable per TEU on Medcar service will be as follows:

TRADE	DRY	REEFER
Mediterranean > Caribbean, South America & French West Indies*	41 € / 43 \$	56 € / 59 \$
Caribbean & South America > Mediterranean	43 € / 45 \$	61 € / 65 \$

** Surcharge not applicable for cargo loaded from France*

These amounts may be subject to quarterly revisions based on changes in regulations and in the market value of carbon quotas.

We are firmly committed to maintaining the quality of our services while complying with our new carbon emission reduction obligations. We appreciate your understanding in this regard.

For any additional information, our teams remain at your disposal.
